Abstract (Basic):

... system for use with a database, which is in stored memory (125) has assigning a *time* *stamp* to transactions to be performed (140), creates multiple version of the data records affected by the update transactions, monitoring a measurable characteristic of memory and deletes prior ones of the *multiple* data record *versions* in response to the *time* *stamp*.

International Patent Class (Main): *G06F-017/30*

INTERNATIONAL PATENT CLASS: *G06F-017/30*

...ABSTRACT The present invention provides persistent Web access, without requiring all web servers to directly handle *time*-*stamps* in a URL. A user enters a dated URL, for example, using a web browser, which is transmitted to a web server. The Web server receives the URL (containing a *time* *stamp*, a relative *time*-*stamp* or a variable *time*-*stamp*), and retrieves the correct Web page(s) from its own archive, or redirects the user...
...has been archived. The Web server interprets the extracted URL in accordance with the selected *time* *stamp* format. The present invention ensures that a time-stamped reference to any Web resource refers...

...SPECIFICATION 1, 1998, entitled "A Method And Apparatus For Persistent Access to Web Resources Using Relative *Time*-*Stamps*," United States Patent Application Serial No. 09/201,751, filed December 1, 1998, entitled "A...

...28, 1999, entitled "A Method And Apparatus For Persistent Access to Web Resources Using Variable *Time*-*Stamps*," each assigned to the assignee of the present invention and incorporated by reference herein.

Field...

...may ultimately replace traditional paper-based media altogether.

Paper-based media generally have an associated *time* *stamp*, and permit an easy determination of the information that was available at a given time...

...nonprofit computer library service and research organization, provides a software tool, referred to as OCLC *PURL* ("*Persistent* *Uniform* *Resource* Locator"), for managing Internet addresses and aliases for general Internet resources. A *Persistent* *Uniform* *Resource* Locator provides flexible naming and name resolution services for Internet resources to ensure reliable, long-term access to Internet resources with minimal maintenance. Generally, OCLC *PURL* assists Internet users in locating Web resources. As previously indicated, the Internet is constantly expanding...

...becomes burdensome.

While a URL points directly to the location of an Internet resource, a *PURL* points to an intermediate resolution service, which translates the *PURL* into the actual URL. Once a Web resource has been registered with the OCLC and assigned a *PURL*, the Web resource may be accessed by means of the *PURL*. A *PURL* assigns a persistent name to a resource even if the location of the resource changes...

...time without having to update the references each time the Web resource is moved. The *PURL* "forwarding" address maintained by OCLC, however, must be kept up-to-date. In other words...

...URL redirect techniques to create an Internet archive service to make the Internet persistent. The *time* *stamp* can be specified in the URL in any suitable format. The present invention allows the...

...The present invention provides persistent Web access, without requiring all web servers to directly handle *time*-*stamps* in a URL. Generally, a user enters a dated URL, for example, using a web...

...the specification of the desired date and time, or the user can manually append the *time* *stamp* to the URL indicated in the "Location" window of the browser. The Web server receives the URL (containing a *time* *stamp*, a relative *time*-*stamp* or a variable *time*-*stamp*), and retrieves the correct Web page(s) from its own archive, or redirects the user...

...Internet archive site. The Web server interprets the extracted URL in accordance with the selected *time* *stamp* format. The present invention ensures that a time-stamped reference to any Web ...invention, the Uniform Resource Locators ("URLs") that identify Web resources are augmented to include a *time* *stamp*. The Web browser 100 and persistent Web servers 140, 150 accommodate the additional *time* *stamp* parameter and allow a user to refer to any Web address with a precise target...

...the specification of the desired date and time, or the user can manually append the *time* *stamp* to the URL indicated in the "Location" window of the browser. The Web server 140 receives the URL (containing a *time* *stamp*, a relative *time*-*stamp* or a variable *time*-*stamp*), and

retrieves the correct Web page(s) from its own archive 145, or redirects the...

...the dated URL to retrieve the desired resource (or a link to the resource).

ILLUSTRATIVE *TIME* *STAMP* FORMATS

The *time* *stamp* can be included in the Uniform Resource Locator ("URL") in any suitable format, as would...

...represented as:

`http://www.lucent.com?time=2+2+1998.`

In a further variation, additional *time* granularity can be *indicated* by including the *time*-of-day in the URL. For example, the web page, `www.Lucent.com`, as it...

...the time zone is assumed to be the user's default time zone. The illustrative *time* *stamp* format described above is a Common Gateway Interface (CGI) search argument. Of course, the month...
...or other time units) can be expressed in any order. For a URL without a *time* *stamp*, the default value will be the most recent version.

In addition, relative *time* *stamps* can be utilized. For example, to refer to the web page, `www.Lucent.com`, as...

...as:

`http://www.lucent.com?time=yesterday.`

Furthermore, if an embedded hyperlink contains a relative *time* *stamp*, the relative *time* *stamp* is based on the current web page. Thus, if a current web page has a...

...the URL as

`http://www.lucent.com?rttime=1998(underscore)1(underscore)9.` Other relative *time* *stamps* can include *time* offsets from the time of the current web page, such as plus or minus a specified period of time. For example, "+10D" can *indicate* plus ten *days* to the time of the currently viewed web page.

In order to refer to the previous or subsequent archived version of a document (relative to the *time* *stamp* of the current document), the URL can be represented using the labels "next(underscore)archive...refer to one of these archives:

`doc.html?rttime=next(underscore)archive`

These relative archive *time* *stamps* make moving between different version of the same documents more efficient.

A time base parameter can be used to specify the reference date for the relative *timestamp*. For example,

`timbase=1998(underscore)6(underscore)11&*time*=+100D`

indicates the *date* that is 100 days after June 11, 1998. Similarly,

`timbase=1998(underscore)6(underscore)11&*time*=next(underscore)Monday`

indicates the *date* that is the Monday after June 11, 1998.

According to another feature of the present invention, wildcard

characters and date ranges in the *time* *stamp* can be used to implement a variable *time* *stamp* in a URL when a user is not sure of the date for a specific...

...manner, the server can display a list of the specific web resources that match the *time* *stamp* pattern. In the illustrative implementation, the following *time* *stamp* patterns are used:

The above *time* *stamp* patterns can be used in the time= or rtime= (relative *time* *stamp*) fields of the URL to specify, for example, an unknown year, month, day, hour, minute or second. For example,

Thus, the *time* *stamp* patterns can be used to request a list of resources having a matching *time* *stamp*. For example

When a server receives a URL request containing a variable *time* *stamp*, the server recognizes that the client is requesting a list of different versions of the...

...links of the matching resources in increasing day order, then in increasing year order.

Relative *time* *stamps* can be extended using the "*" wildcard at the end of the time value. For example...

...9, 1999).

In an alternate implementation, referred to herein as the "request-header scheme," the *time* *stamp* can be *indicated* as one of the HTTP request headers, such as:

Time-*Stamp*: June 9, 1998.

In another embodiment, referred to herein as the "special character scheme," special characters can be utilized to indicate the inclusion of a *time* *stamp* in the URL, such as:

http://www.cnnfn.com;time=2+2+1998&timezone=server...

...fact, a conventional Web browser 100 can be utilized, with the user manually appending the *time* *stamp* to the URL indicated in the "Location" window of the browser 100.

In one implementation, the user has the option to turn the *time* *stamp* on or off. If the *time* *stamp* is activated, the browser 100 will change the URL accordingly before sending the URL out...

...130. Since there is no guarantee that the corresponding web server 140, 150 recognizes a *time* *stamp*, the document returned by the server 140, 150 might contain embedded hyperlinks that do not contain *time* *stamps*. Thus, in this situation, the web browser 100 can automatically convert the URL associated with an embedded hyperlink to add an appropriate *time* *stamp* when the user clicks on the hyperlink if the *time* *stamp* option is activated. The Web browser 100 should convert the URL in accordance with the selected *time* *stamp* format. In a request-header-scheme implementation, the browser 100 should be modified to send the special request header ("*Time*-*Stamp*: June 9, 1998"). In addition, the HTML should be modified to include a new *time* *stamp* tag for any embedded hyperlink with a specific *time* *stamp*. For example, for a hyperlink such as:

PERSISTENT WEB SERVERS

The persistent Web servers 140...

...persistent Web servers 140, 150 need to know how to (i) receive URLs containing a *time* *stamp* or relative *time*-*stamp*, (ii) extract the *time* *stamp*, (iii) retrieve the Web page corresponding to the appropriate *time*-*stamp*, and (iv) return the requested page to the client. The persistent Web servers 140, 150 should interpret the

extracted URL in accordance with the selected *time* *stamp* format.

If a version of the Web resource corresponding to the requested time does not...

...the previous archived version, and the version of the Web resource with the most recent *time*-*stamp* preceding the requested *time* is provided. Alternatively, the version of the Web resource with the next immediate *time*-*stamp* after the requested *time* is provided.

In addition, the persistent Web servers 140, 150 need to preserve all the...

...persistent, it should only have minimal impact. In one embodiment, if a request includes a *time* *stamp* that is not recognized by a Web server, the server should deliver the most recent...stock broker transactions, it is easy to extract part of the record for a given *time* *stamp* restriction. For example, to check the account balance of a give date, the browser 100...

...2, 1998 and return the results. Since all the transactions in such application environments have *time* *stamps* anyway, it is straightforward to add this function to the service.

For real time contents, the only restriction in appending a *time* *stamp* is the storage requirement. If a lot of storage space is available compared ...The present invention provides persistent Web access, without requiring all web servers to directly handle *time*-*stamps* in a URL. Generally, a user enters a dated URL, for example, using a web...

...the specification of the desired date and time, or the user can manually append the *time* *stamp* to the URL indicated in the "Location" window of the browser. The Web server receives the URL (containing a *time* *stamp*, a relative *time*-*stamp* or a variable *time*-*stamp*). Thereafter, the Web server retrieves the correct Web page(s) from its own archive, or...

Title: Software maintenance features for library systems

Author(s): Herness, E.N.; Chance, R.M.

Author Affiliation: IBM Syst. Products Div., Rochester, MN, USA

Conference Title: Proceedings of the Conference on Software Maintenance - 1988 (IEEE Cat. No.88CH2615-3) p.183-90

Publisher: IEEE Comput. Soc. Press, Washington, DC, USA

Publication Date: 1988 Country of Publication: USA xiii+418 pp.

ISBN: 0 8186 0879 X

U.S. Copyright Clearance Center Code: CH2615-3/88/0000-0183\$01.00

Conference Sponsor: IEEE; NBS; ACM; Software Maintenance Assoc

Conference Date: 24-27 Oct. 1988 Conference Location: Scottsdale, AZ, USA

Language: English

Subfile: C

...Abstract: library blocking, and multiple maintenance support, three advanced features that can be implemented in many *file*-based library control systems, are discussed. They can provide programmers with a development and maintenance environment that will allow them to maximize *time* spent writing new *code* and minimize *time* spent maintaining *multiple* *versions* of old code. They can also help management get a better idea of the state...

REVISION DATE: 20020830

...authoring language will be released in 1996; the product will eliminate the need for run-*time* *versions*, because the *code* can run on *many* platforms. Products like HyperCard emphasize hyperlinks (clickable items that activate another, related area of the application) and navigation tools more than presentation functions. Hyperlinked *documents* have some similarities to electronic publishing programs, like Folio Views, which have strong search functions...

... persistent storage of electronic document by modifying requested
version of electronic document to update embedded to incorporate time -
stamp of requested version of electronic document and transmitting it to
client

Inventor: ONG P

Abstract (Basic):

... request may be received for one of the versions of the
electronic document. The request includes a **time - stamp**. The
requested version of the electronic document is modified to update
embedded hyperlinks in the requested version of the electronic document
to incorporate the **time - stamp** of the requested version of the
electronic document. The requested electronic document is transmitted
to a client.

... The **time stamp** can be specified in the URL in any suitable
format. Allows a user to refer to any...
